SUMMARY

Technology Analyst with experience designing and developing enterprise web applications that improve IT operations and technician workflows. Skilled in full-stack development using React, Python, PostgreSQL, and modern DevOps tools including Docker, Kubernetes, and GitHub Actions. Experienced collaborating with stakeholders, gathering user requirements, and building internal tools that streamline workflows while also supporting enterprise technology environments.

EDUCATION

Illinois Institute of Technology, Chicago, IL
Bachelor of Science, Computer Science

MAY 2026

SKILLS

Programming & Web Development: Python, JavaScript, React, HTML, CSS, SQL, Vite, Node.js

Databases & DevOps: PostgreSQL, MySQL, Docker, Kubernetes, GitHub Actions, CI/CD

Enterprise Technologies: ServiceNow, Nexthink, Microsoft 365, Entra ID, Active Directory, PowerShell

Systems: Windows 10/11, macOS, iOS, Hardware Troubleshooting, Device Configuration, Software Deployment

Certifications: MTA: Introduction to Javascript, ITIL 4 Foundation (in-progress)

Languages: English, Spanish

PROFESSIONAL EXPERIENCE

Technology Analyst

Eli Lilly and Company, Indianapolis IN

MAY 2026 – PRESENT

- Design and develop enterprise web applications using React, Python, and MySQL to improve technician workflows and IT operations
- Lead development of an administrative web portal to centralize workflows, automate processes, and improve operational visibility
- Gather business requirements and conduct user interviews to translate operational needs into scalable software solutions
- Deploy and maintain containerized applications using Docker, Kubernetes, GitHub Actions, and CI/CD pipelines
- Investigate and resolve enterprise technology incidents using ServiceNow, Nexthink, and Microsoft 365

Software Engineer Intern

Eli Lilly and Company, Indianapolis IN

MAY 2025 - AUG 2025

- Developed and deployed an enterprise web application using React, Python, and PostgreSQL to centralize user and device history for IT technicians
- Conducted interviews with 20+ technicians to identify workflow bottlenecks and design intuitive software solutions
- Reduced IT ticket resolution time by 10% by streamlining access to user and device information
- Supported deployment and maintenance of containerized applications using Docker, Kubernetes, GitHub Actions, and CI/CD pipelines

PROJECTS

Marketing Analytics Developer

SHPE Engagement Platform

FEB 2026 – MAY 2026

- Designed a PostgreSQL database and ETL workflows to consolidate engagement data for 900+ SHPE members
- Developed dashboards to track member retention, event attendance, and campaign performance for executive leadership
- Implemented a point-based loyalty system that improved reporting accuracy and streamlined engagement analytics
